Full Stack & AI Engineer

SUMMARY

Senior Full Stack Developer with 8+ years of experience designing, developing, and deploying scalable, secure, and high-performance web applications, enterprise platforms, and AI-powered solutions. Proficient in TypeScript, JavaScript, Python, C#, React.js, Next.js, and Node.js, PHP, Laravel with strong expertise in modern frontend development, backend engineering, RESTful APIs, GraphQL, microservices, and serverless architectures. Experienced in building intelligent applications using LLMs, RAG, LangChain, LangGraph, AI agent orchestration, multi-agent systems, semantic search, and vector databases, integrating advanced AI capabilities into production-ready software. Skilled in cloud architecture and DevOps across Microsoft Azure and AWS, including containerisation with Docker, Kubernetes orchestration, Terraform infrastructure automation, and CI/CD pipeline implementation. Strong background in relational and NoSQL databases, automated testing, application security, performance optimisation, and system integration.

CORE COMPETENCIES

Full-Stack Software Engineering | Scalable Web Application Architecture | Frontend & Backend Development | API Design & Integration | Mobile Android App (Flutter, React Native) | React, Next.js & TypeScript | Python, PHP & Laravel & Livewire | Database Design & Optimization | AI/LLM Integration & RAG | AI Agents & Workflow Automation | Cloud Engineering (AWS, Azure) | DevOps & CI/CD Automation | Docker & Kubernetes | Secure Application Development | Performance Optimization | Technical Problem-Solving & System Integration

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript, Python, C++, C#

Frontend Technologies: React.js, React Native, Next.js, Three.js, WebGL, Redux, HTML5, CSS3, SASS, Tailwind CSS

AI & LLM Technologies: OpenAI, LangChain, LangGraph, LangSmith, RAG, LLM Fine-Tuning, Prompt Engineering, Embeddings, Semantic Search, AI Agent Orchestration, Multi-Agent Systems, Function Calling, Vapi.

Cloud & DevOps: Microsoft Azure (App Services, Functions, AKS, Blob Storage, Cosmos DB, Cognitive Services, AI Studio, DevOps, Logic Apps), AWS (EC2, S3, RDS, Lambda, DynamoDB, IAM, CloudFormation, EKS, ECS, Bedrock), Docker, Kubernetes, Terraform, CI/CD (GitHub Actions, Azure DevOps, AWS CodePipeline, Jenkins), Cloudflare

Backend & API Development: PHP, Laravel, Livewire Django, Flask, FastAPI, TypeScript (Node.js, Express, NestJS), RESTful APIs, GraphQL, Microservices Architecture, Authentication (JWT, OAuth, Azure AD), Serverless Architecture (Azure Functions), WebSockets, Flutter, Dart

Database Management: PostgreSQL, MySQL, MongoDB, Azure Cosmos DB, AWS DynamoDB, Redis, Elasticsearch, Vector Databases (Pinecone, Weaviate)

Testing & Debugging: TDD, Mocha, JEST, Pytest, Cypress, React Testing Library, TypeScript type testing

Version Control & Collaboration: Git, GitHub, GitLab, Bitbucket, Azure Repos, Agile/Scrum, Jira, Confluence, Jira Service Management, ServiceNow, Zendesk

PROFESSIONAL EXPERIENCE

Senior Full Stack Developer

Almuc Advertising GmbH, Munich, Germany *June 2022 – present*

- Applied modern JavaScript features, including ES6+ syntax, destructuring, modules, array methods, and asynchronous programming, to develop efficient and readable frontend code.
- Implemented frontend integration patterns for PHP and Laravel backend services, connecting React interfaces to REST APIs and handling structured JSON data.
- Developed interactive, functional component-based frontend applications using React Hooks, JavaScript, and TypeScript, alongside backend applications and RESTful APIs using Python, Django, Flask, and FastAPI, focusing on reusable components, modular architecture, maintainability, and efficient data processing.
- Maintained a dynamic portfolio platform using PHP, Laravel, Livewire, and MySQL, implementing end-to-end functionality across frontend interfaces, backend services, and database operations.
- Validated server-side request handling, routing, middleware, and form validation using Laravel features to support reliable application workflows and consistent data processing.
- Designed and managed relational database structures using MySQL and Laravel Eloquent ORM, implementing data models, relationships, database migrations, and efficient queries for content management.
- AI-powered applications integrating Large Language Models (LLMs) through external APIs and locally hosted models, exploring practical use cases for conversational AI, intelligent automation, and AI-assisted workflows.
- Built local AI applications and developer tools for running, configuring, and interacting with locally hosted language models, gaining experience with local inference, model integration, and privacy-conscious AI workflows.
- Explored Retrieval-Augmented Generation (RAG) approaches to combine language models with external knowledge sources, enabling context-aware responses based on relevant application data and retrieved information.
- Integrated AI services with backend APIs and application components, developing reusable modules for model communication, response processing, error handling, and data exchange.

Full Stack Developer

Freelancer *June 2017 – July 2022*

- Designed and developed full-stack web applications using React.js, Next.js, TypeScript, JavaScript, and Python, integrating responsive frontend interfaces with backend services and RESTful APIs.
- Built reusable frontend components and interactive user interfaces using React Hooks, Redux, Tailwind CSS, and modern JavaScript, focusing on maintainability, accessibility, and performance optimisation.
- Developed backend applications and API services using Django, Flask, FastAPI, Node.js, Express, and NestJS, applying modular architecture, asynchronous processing, and reusable service components.
- Implemented AI-powered applications using OpenAI APIs, embeddings, semantic search, function calling, and AI agent orchestration to support intelligent automation and context-aware interactions.
- Designed and integrated RESTful APIs, GraphQL endpoints, and WebSocket-based communication to support frontend-backend integration, real-time updates, and third-party service connectivity.
- Implemented authentication and authorisation mechanisms using JWT, OAuth, and Azure Active Directory, supporting secure API access and identity management.

- Developed a Flutter-based Android application integrating task management, habit tracking, and focus timer features to enhance productivity, support consistent routines, and improve time management through an intuitive user interface.
- Designed and integrated relational, document, and PostgreSQL, MySQL, MongoDB, Redis, Pinecone, and Weaviate, supporting application persistence, caching, and semantic retrieval.
- Deployed and managed application workloads using Microsoft Azure and AWS services, including Azure App Services, Azure Functions, Azure Blob Storage, AWS EC2, S3, Lambda, RDS, and Bedrock.
- Containerised applications using Docker and Kubernetes, supporting consistent development environments, deployment automation, and scalable application delivery.
- Implemented infrastructure automation and CI/CD workflows using Terraform, GitHub Actions, Azure DevOps, AWS CodePipeline, and Jenkins to streamline builds, testing, and deployments.
- Developed serverless application components using Azure Functions and AWS Lambda, integrating event-driven processing and cloud-managed services.
- Developed interactive 3D web experiences using Three.js and WebGL, combining JavaScript-based rendering, dynamic visual elements, and modern frontend technologies.
- Applied cloud security and deployment practices involving IAM, environment configuration, access controls, and managed cloud services to support reliable application operations.

EDUCATION

Hochschule München, Germany

Bachelor's in Computer Science *2014 – 2017*

LANGUAGE

- German (Native)
- English (C2)
- Italian (C2)
- Romanian (C1)
